PROJECT INFORMATION SHEET

Project Type: CIR/HMA

Description: Work will include recycling the existing pavement using a procedure called "Cold-in-place recycling" (CIR) where additional materials are added to the pulverized existing pavement and laid back down on the roadway. After sufficient time has passed to allow the recycled pavement to dry, a new asphalt overlay is constructed over the recycled roadway. Asphalt will extend to the ROW of existing driveways and side roads.

Schedule: Work is typically completed between the months of May and September.

Traffic impact: Traffic will generally remain open to one lane during recycling and asphalt construction activities; however, there will be travel delays. Detours will not be signed, but the public is encouraged to take alternate routes whenever possible to reduce traffic through the project.
